ZAYNA KIRLEW

User Experience Designer

Sunrise, FL | Open to relocating to Madison, WI | zayna.kirlew@gmail.com | linkedin.com/in/zkirlew | Portfolio: zaynakirlew.wixsite.com/design

PROFESSIONAL SUMMARY

User Experience Designer passionate about making complex software genuinely joyful to use. Skilled at meeting directly with end users to understand their workflows through contextual research, then partnering with engineers to translate findings into intuitive, visually polished applications—moving fluidly across sketches, wireframes, high-fidelity mockups, and interactive prototypes. Background spans healthcare imaging technology and healthcare software design, with a strong foundation in information architecture and user-centered design.

SKILLS & SOFTWARE

UX & Visual Design: Sketching, Wireframing, High-Fidelity Mockups, Interactive Prototyping, Information Architecture, Visual/UI Design, Design Systems & Components

Research & Discovery: Contextual Inquiry, User Interviews, Workflow Observation, Personas, Usability Testing, Competitive Analysis

Tools & Software: Figma, Figma Make, Adobe XD, Miro, Jira, Claude, Adobe Photoshop

Programming Languages: HTML, CSS, JavaScript

PROFESSIONAL EXPERIENCE

3D Robotic Surgery Imaging Technician — Stryker — October 2024 – Present | Weston, FL

- Collaborated cross-functionally with engineering and quality teams to analyze surgical imaging workflows, identifying friction points and redesigning processes that improved accuracy and production efficiency by 30%.
- Ran the Q12 Ambassador initiative, conducting user interviews and qualitative research to surface team pain points and feedback, then translated findings into prioritized recommendations for department leadership.
- Completed the Segmentation Mastery Program, a leadership track covering cross-functional communication, operational governance, and peer mentoring.

Freelance 3D Designer — Self-Employed — October 2022 – October 2024 | Remote

- Designed digital assets and onboarding experiences for clients, balancing business needs, user goals, and technical constraints across a range of product and marketing touchpoints.
- Produced data-informed onboarding materials and visual flows that drove a 15% increase in lead conversions by addressing unmet user needs at key journey touchpoints, presenting iterative explorations directly to clients.

Environment Artist — CyberDream VR — January 2022 – April 2022 | Remote

- Designed UI/UX elements and onboarding tutorials for immersive training experiences, applying spatial UX and instructional design principles to guide users through complex interactions with minimal friction.
- Partnered with engineers across iterative design reviews and QA testing cycles to refine functional interfaces and resolve usability issues prior to release.
- Presented design concepts and directions—informed by user research and market trends—to internal stakeholders, aligning design decisions with both user needs and business goals.

PROJECT EXPERIENCE

Solo CX Designer — MedPortal (Incubator Idea) — May 2026

- Owned end-to-end design of a high-fidelity B2B medical-device portal, from research through a fully articulated information architecture, after analyzing call-log data and interviewing industry professionals to surface three main root-cause pain points.
- Built three role-based dashboards (Procurement Lead, OR Clinical Specialist, Biomedical Engineer) in Figma under a single login, replacing org-chart navigation with task-based interfaces built around what each user needed to do.
- Designed a predictive AI risk-scoring feature synthesizing usage frequency, fault history, warranty status, and fleet-wide patterns into a single per-device score, projected to cut unplanned downtime 70% and shift repair costs from ~$4,200 emergency visits to ~$1,400 scheduled service (projected, not measured).
- Resolved an alert-fatigue design tension by gating notifications on urgency and required action rather than status alone, projected to cut order-status lookup time from 48+ hours to under 2 minutes and reduce status-check calls 50–60% (projected, not measured).

EDUCATION

Bachelor of Arts in Digital Arts & Sciences — University of Florida, Gainesville, FL — 2018 – 2022
