ZAYNA KIRLEW

User Interface and Experience Designer

Sunrise, FL | zaynakirlew@gmail.com | linkedin.com/in/zkirlew | Portfolio: zkirlew.github.io/index.html

PROFESSIONAL SUMMARY

UX Designer with roots in game design and 3D visualization, bringing a hands-on understanding of surgical imaging workflows and medical device software gained at Stryker. Skilled at translating complex clinical workflows into intuitive, visually polished interfaces and moving fluidly from early sketches to high-fidelity prototypes. Equally comfortable working within established design systems and building new ones, with the technical fluency to collaborate closely with engineering teams from concept through implementation.

SKILLS & SOFTWARE

UX & Visual Design: High Fidelity Interface Design, Interactive Prototyping, Reusable Components & Design Systems, Wireframing, User Flows, Information Architecture, Visual Hierarchy

Research & Discovery: Contextual Inquiry, User Interviews, Workflow Observation, Personas, Usability Testing, Competitive Analysis

Tools & Software: Figma, Figma Make, Adobe Photoshop, Adobe XD, Adobe After Effects, Adobe Illustrator, Blender, Maya, Unity, Miro, Jira, Claude

Programming Languages: HTML, CSS, JavaScript

PROFESSIONAL EXPERIENCE

3D Robotic Surgery Imaging Technician — Stryker — October 2024 – Present | Weston, FL

- Collaborated cross-functionally with engineering, quality, and customer service teams to analyze and troubleshoot surgical imaging workflows, identifying friction points and redesigning processes that improved accuracy and production efficiency by 30%.
- Led the Q12 Ambassador initiative: interviewed colleagues across teams, documented pain points and moments of success, and presented prioritized recommendations to department leadership.
- Completed the Segmentation Mastery Program, a leadership track covering cross functional communication, operational governance, and peer mentoring.

Freelance 3D Designer — Self-Employed — October 2022 – October 2024 | Remote

- Designed 3D assets, visual concepts, and motion graphics for indie games, VR experiences, and marketing materials in Blender, Maya, Cinema 4D, and After Effects, balancing client needs, product vision, and technical constraints.
- Produced data-informed onboarding materials and visual flows that drove a 15% increase in lead conversions by addressing unmet user needs at key journey touchpoints, presenting iterative explorations directly to clients.
- Managed projects independently from concept to delivery, presenting design rationale directly to clients and adapting to feedback.

Environment Artist — CyberDream VR — January 2022 – April 2022 | Remote

- Built immersive Unity VR environments, applying spatial UX and instructional design principles to guide users through complex interactions with minimal friction.
- Designed modular, component-based 3D assets structured for reuse and flexibility across scenes.
- Partnered with engineers across iterative design reviews and QA testing cycles to refine functional interfaces and resolve usability issues prior to release.
- Presented design concepts that were informed by user research and market trends to internal stakeholders, aligning design decisions with both user needs and business goals.

PROJECT EXPERIENCE

Solo CX Designer — MedPortal (Incubator Idea) — May 2026

- Owned end-to-end design of a high-fidelity B2B medical-device portal, from research through a fully articulated information architecture, after analyzing call-log data and interviewing industry professionals to surface three main root-cause pain points.
- Built three role-based dashboards in Figma under a single login, replacing org-chart navigation with task-based interfaces built around what each user needed to do.
- Designed a predictive AI risk-scoring feature synthesizing usage frequency, fault history, warranty status, and fleet-wide patterns into a single per-device score, projected to cut unplanned downtime 70% and shift repair costs from ~$4,200 emergency visits to ~$1,400 scheduled service.
- Resolved an alert-fatigue design tension by gating notifications on urgency and required action rather than status alone, projected to cut order-status lookup time from 48+ hours to under 2 minutes and reduce status-check calls 50–60%.

EDUCATION

Bachelor of Arts in Digital Arts & Sciences — University of Florida, Gainesville, FL — 2018 – 2022
